PARALLAX SCROLL / RESPONSIVE DEMO (11/7)

Introduction:

By popular demand, we will each build a quick parallax scroll website using only CSS. We will write the CSS together, step-by-step, to develop an understanding of how CSS is used in this case for the parallax effect. We will then explore some responsive web design concepts after we put together the CSS.

I have provided some starting code and some background images you can choose for your version of the parallax scroll site. For tonight's grade, **you must submit your code to me before the end of class.**

You can upload a zip file to the class Box.net folder and message me that your code from tonight is there:
